

KALEIDOSCOPES | MANDALA PRINTS | WORKSHOPS

Judyth Greenburgh - a self described "kaleidoscope junkie." sees kaleidoscopes as a metaphor for life and personal transformation.

She made the transition from a corporate advertising art director to a "feral artist" living in the tiny desert town of Darwin, California in southern Inyo County., reclaiming what has been abandoned through the transformative process of creating art.

Judyth creates an array of whimsical hand-made kaleidoscopes as well as a stunning series of art prints capturing in time momentary mandalas as seen through her varied and inventive scopes.

She also shares her passion for this art by offering a range of workshops.

People's Choice Award Winner at Brewsters Kaleidoscope Society Convention 2018.

THANKYOU FOR BUYING A DJ SCOPE.

Each piece contains

- 1.) 2x double sided Vogue Vintage picture record (78rpm)
- 2.) A vintage microphone (Carlrad DM58) converted into a 3 mirror trapezoid taleidoscope
- 3.) A working telescopic microphone stand with clip.
- 4.) Working turntable, battery or main - that you can use to play proper records or plug in as a blue tooth speaker.
(Charger, cables, warranty & instructions included)

INSTRUCTIONS

Setting up turntable.

- Remove all the packing materials
- It can be operated without an outlet once the battery, using the plug provided
- Turntable either works as a blue tooth speaker or a record player*.
- Place Vogue Picture disc on turntable. (Each has 2 different sides to choose from)
- Switch mode to 'turntable' and choose speed*
- NB: The Vogue picture records play at 78rpm if you want to hear the songs but it's rather fast for kaleidoscope viewing.
- To go slower without listening to the sound, disengage the needle (leaving arm on raised position) and switch to 33rpm. or just turn the table manually to go even slower.

*See instructions for further info on turntable features etc.

Setting up Microphone / kaleidoscope.

- Remove all packing materials.
- Assemble Microphone base, stand and clip.
- Place microphone in stand at the similar angle as shown with eyepiece facing you (upside down to a regular microphone).
- Take care the microphonescope is secure in the stand.
- Place near the turntable and adjust height and angle so that you have a good image through the scope.
- Switch on the player and enjoy!

What is a Vogue Record?

Vogue picture records were produced by Sav-Way Industries of Detroit, Michigan between 1946 and 1947. The discs were initially a hit, because of the novelty of the colorful artwork, and the improved sound compared to the shellac records dominant at the time. The discs were manufactured by first sandwiching printed illustrations around a core of aluminum, then coating both sides with clear vinyl upon which the grooves were stamped.

The company released between 67 and 74 double-sided 78 rpm gramophone records. The colorful artwork on the records and limited production have made Vogue Records a collector's item.
